

CELEBRATE NATIONAL DONOR DAY FEBRUARY 14TH ISN'T JUST VALENTINE'S DAY

Most people know February 14th as Valentine's Day, but it also marks a very important day for those involved in second chances as National Donor Day. It is a day to honor the donors that gave the ultimate gift of life and to raise awareness for those still awaiting their life-saving transplant.

Every ten minutes, someone is added to the national transplant waiting list and currently, more than 5,000 people right here in our great commonwealth are in need of a life-saving organ. But we, as a community, can come together to make a difference for our fellow neighbors by registering to become an organ, tissue, and cornea donor. Neighbors like, Denise and Janet King, whose husbands were both donors. Brothers Joe and Danny King both became donors because it was always in their nature to help others. After spending years as saving people as firefighters, they also became heroes in death as organ and tissue donors, saving and healing the lives of so many. Their legacy will live on forever.

Donate Life Pennsylvania and CORE, along with hospital partners, public officials, and community members will continue to strive to bridge the gap between generous donors and the ever-growing need for transplants.

To register your decision to save and heal lives through organ, tissue and cornea donation, please sign up next time you renew your driver's or hunting and fishing licenses or register today by visiting core.org/register.
